# St. Vincent Randolph Hospital

August 14, 2003

To whom it may concern:

I manage four rural health clinics in Eastern Indiana. The clinics are heavily dependant on grant funding to bring more services to our health professional shortage area. We see approximately 50,000 patient visits a year in our facilities with our main focus on primary care.

We installed MedInformatix in one of our rural health clinics in March of 2000. We have since installed it in the remaining three facilities.

I am able to request highly specialized report queries in order to satisfy grant requests without any difficulty. I am able to trend productivity of our providers as well as do quality improvement initiatives by using diagnosis and medication lists.

MedInformatix has been instrumental in making St. Vincent Randolph Hospital one of the model rural health clinics in the Nation. I would be happy to talk to you about this product any time.

Sincerely,

Joanie M. Perkins, CPC  
Practice Manager
